Peter Martin, Walki Oy

Dear Juha,

We at Walki have tested a new BIOBASED hotmelt K 7050 Bio from Savotech on our big winder and we have seen that viscosity is lower and it is good for our system. The adhesion to our substrates has been fine. The spray pattern is excellent, and it was easy to adjust the system.

We also noticed that we were able to decrease the temperatures which means longer service interwall. The lower temperature in our hotmelt tank also means improved safety for operators.

With every use of 1 ton hotmelt K 7050 Bio, the CO2 in atmosphere reduces by 0,9 ton.

The Savotech instructions were very helpful. The service we get is prompt and reliable. Our questions have been professionally answered.

Delivery security is very important to us at Walki and Savotech AB has proven to be a reliable partner.

Kind regards,

Roy Möller
